*Simple list of names of
marine molluscs of the
Mediterranean Sea*

versione 1.0

PREMESSA – PREMISE

Con 2179 specie ripartite in 820 generi, 282 famiglie e 8 classi, questa “semplice lista” contenete soltanto il nome della specie, l’autore e la famiglia di appartenenza, ti offre un aiuto per avvicinarti alla conoscenza dei molluschi del Mare Mediterraneo. Questo lavoro deriva dal Nuovo Catalogo Illustrato del Mediterraneo pubblicato nel 2012 dall’Associazione Naturalistica Malachia sul proprio sito www.malachia.com.

Mancano quindi almeno 3 anni di aggiornamenti ma questo non impedisce di essere una lista utile per te che ti sei avvicinato da poco al mondo della malacologia.

Ti ricordiamo che circa 400 specie non posseggono conchiglia e non potranno quindi rientrare nella tua collezione. Ci sono poi alcune specie determinate su pochissimi esemplari e quindi considerate molto rare anche perché spesso provengono da dragaggi effettuati a profondità di centinaia di metri.

Possiamo definire, quindi, “molto buona” una collezione che contenga 700-1000 specie del Mare Mediterraneo.

With 2179 species divided into 820 genera, 282 families and 8 classes, this "simple list" containing only the species name, the author and the immediate family, offers a you closer to the knowledge of the molluscs of the Mediterranean Sea. This work comes from the “Nuovo Catalogo Illustrato del Mediterraneo” published in 2012 dall’Associazione Naturalistica Malachia on its website www.malachia.com.

Therefore choose at least 3 years of updates but that does not stop it from being a useful list for you that approached recently to the world of Malacology.

We remind you that about 400 species do not have shell and can not therefore fall within your collection. There are some species classified on very few examples and then considered very rare because often come from dredging carried out at depths of hundreds of meters.

We can define, then, "very good" a collection that contains 700-1000 species of the Mediterranean Sea.
